For complete details, visit [www.kwanlindun.com/employment](http://www.kwanlindun.com/employment)

## New Kind of Hydraulic

From the Yukon (Dawson) Sun 12th inst: Several sleigh loads of machinery are expected from the outside today, which may be the initiatory step toward the revolutionizing of the mining industry of the north. The consignment is for the N.A.T.&T. Co., and consists of an experimental plant called the Adams hydraulic lift. It will be installed at once at No. 63 below on Bonanza, under the personal supervision of J.H. Adams, its inventor.

The plant was built in San Francisco especially for the Klondike test. The plan of operation is different from the ordinary hydraulic work, and as the name implies it is in the nature of a lift, whereby gravel can be raised into a sluice box from a point many-feet below. Its principle is similar to a centrifugal pump. The apparatus contains two main pipes, one of which by gravity plays on the bed of gravel and forces it upward through another pipe into a sluice box. Mr. Adams in an interview, said:

"The introduction of the invention is merely an experiment, and much difficulty is apprehended in bringing it to a successful basis of operation. The objectionable features in the north are many.

"In the first place where we intend to experiment the lay of the ground prohibits a bedrock flume to carry away the residue from the works. Again, where heretofore the grav-

ity system has been employed the water must be pumped on Bonanza.

"The plants are now successfully operating in all parts of the world. I have opened up propositions in South Africa, South America, Mexico and Korea. In every case the ground has been handled economically and with great profit to the owners.

"If the results from the Bonanza efforts are all that are anticipated, an order for a number of mammoth plants will at once be given, which will be operated in various parts of the Yukon.

"The beneficial results that will, under these circumstances, accrue to the mining industry of the country cannot be estimated. Ground that is now considered absolutely worthless will pay big returns. To the owners of ground that is fairly rich it will men increased profits.

"The general production of the country would be greatly increased in the saving of many millions of dollars which now go to waste by the present system of mining.

"The N.A.T.&T. Co., realizes the vast benefits to be derived if the idea is successful, and on this basis is willing to spend considerable money and time to demonstrate the feasibility of the new invention."
